

PARADUST

Dust mite bed purifier

DUST MITES, INVISIBLE GUESTS IN OUR HOMES

Dust mites are very small spider-like creatures, so small they can't be seen with the human eye. They mainly feed on dead skin flakes and need a **warm and humid environment** to reproduce. They are therefore mostly found in the bed, the sofa and any other textile with natural and synthetic fibers. Their number is particularly high if the bedroom has little sun, is overheated, poorly ventilated, or with a tendency to humidity or having a large number of fabric furnishings (carpet, wall fabrics, cushions, armchairs, etc.)

DUST MITES AND THEIR DROPPINGS ARE ONE OF THE MAIN CAUSES OF ALLERGIES

Dust mite allergies occur more and more frequently; their development being often linked to our life style. Today dust mite allergies occur already in 26% of the households. The cause of allergies is **not the dust mites themselves, but rather their droppings** containing several allergy inducing substances (allergens).

An allergy to dust mites can become apparent through:

- Rhinitis (running or congested nose), occurring throughout the year, sinusitis and even rhinopharyngitis and repeated bouts of otitis.
- Coughing at night, bouts of bronchiolitis and asthma.
- Atopic eczema, particularly in young children.

These various clinical manifestations are sometimes found in combination. They are also generally more severe when the involved person lives in an environment with a high dust mite count, and this is observed particularly in the case of asthma.

PARADUST BED PURIFIER REDUCES THE RISK OF DUST MITE ALLERGY

By adding Paradust bed purifier to your cleaning routine you will greatly reduce the risk of dust mite allergy.

Paradust bed purifier is a cleanser containing a mix of probiotic organisms (also known as 'good bacteria') which have a double effect:

- **they lower the humidity** of the treated surface
- **they consume dust mite droppings**, as such the allergens

Paradust contains natural ingredients and can be used safely around adults, children and pets.

The efficiency has been tested at the home of persons allergic to dust mite.

DIRECTIONS FOR USE

Use Paradust bed purifier on a daily basis during the first week. Thereafter, repeat the treatment every 3 days.

You will notice the results after 10 days of usage.

Paradust bed purifier can be used on textiles such as sheets, pillows, mattresses, furnishing fabrics, teddy bears, carpets. Paradust bed purifier can be used at any **moment of the day**; even just before sleeping.

GENERAL RECOMMENDATION

It is advisable that asthmatic persons do not carry out the application personally. There is no allergic reaction to the product, but there can be to the very fine pulverisation of the aerosol.

MAINTAIN GOOD HYGIENE

The following measures will greatly contribute to the alleviation of your dust mite allergy:

1) The ideal bedroom should be:

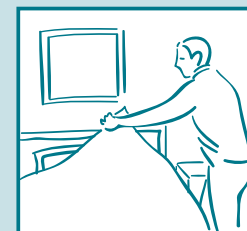

- kept clean
- frequently aired: at least 15 minutes a day
- unheated in winter: 18°C is the ideal temperature
- furnished with a minimum of fabric furnishings (wall paper, rugs and carpets)
- furnished with washable man made fiber bedding (quilt, blankets, pillows, etc.- and foam mattress on non upholstered base).
- void of domestic animals
- without plants
- south facing

2) Spray your bed, teddybears, sofa and other fabric on a regular basis with Paradust bed purifier.

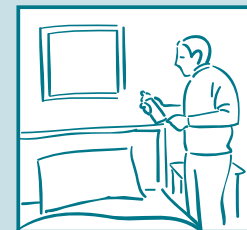

3) Treat the whole room; especially when carpeted or with wall paper, with Paradust room sanitizer.

Four important points before starting to use the product:

- shake the bottle well before every use
- hold the bottle vertically when using
- leave the pillow and any other object which are normally in the bed (eg teddy bear) in place.
- do not spray longer than 2 to 3 seconds per single bed. The bed or the treated surface should not show any wet spots.

1. Open up your bedding completely to free your sheets and pillow.

2. Shake the bottle before use.

3. Hold the spray can top upright during the usage. Spray approx. 50 cm above the sheets and pillow for 2 to 3 seconds per bed. Spray sparingly, leaving no wet spots. The product mist will fall down on the surface.
